

Commissioning

Highest
performance
right from the
start

COMMISSIONING

Highest performance right from the start

Thanks to our professional commissioning, we accomplish the prerequisite for smooth and efficient plant operation.

Request for experts

To ensure that actuators and valves fulfil their intended tasks within the process flow, experience and know-how are prerequisites for successful commissioning. You will find both with AUMA service experts.

Processes at optimum

We check the application conditions on site, detect potential weak points and immediately provide remedy. Process requirements are crucial factors of consideration for actuator setting. This avoids high readjustment costs. Your processes run at optimum.

Your AUMA Plus

- + Optimum performance of your plant
- + High process safety
- + Perfect actuator setting
- + Clear documentation
- + Warranty extension by one year

» All parameters are perfectly adapted to process requirements. This is the only way to ensure that both actuator and valve can perfectly fulfill their tasks.«

auma
Solutions for all wind tunnel systems

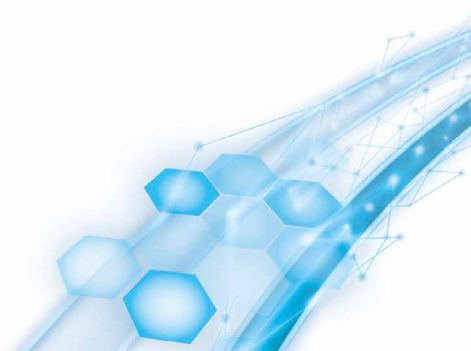

Our performance scope for commissioning

STANDARD SERVICES

- Review of actuator installation
- Consideration of potential environmental influences
- Professional parameter setting
- Optimum setting of end positions for travel and torque
- Performing functional testing and test runs
- Digital device recording
- Creation of required documentation

OPTIONAL SERVICES

- Customer-specific parametrisation and setting
- Enabling and setting of special parameters, e.g. positioner, process controller, optimisation parameters, interlocks
- Functional upgrades and conversions including documentation updates, e.g. mechanical position indicator, I/O interface
- Integration tests with the DCS
- Process optimisation
- Instruction of the operating personnel on site

Combinable services

The following services may also interest you:
