| Notes on table | | | | | |
|---|---|--|--|--|--|
| 1) Protection on site | For short-circuit protection of the actuator, fuses have to be provided by the customer. The actuators are suitable for use in current circuits with a maximum short-circuit 1-phase AC current value of 5,000 A root-mean-square (R.M.S). The output data of the fuses to be provided on site must not exceed the following values: 32 A/600 V at a maximum mains mains short circuit current of 5,000 A AC. | | | | |
| 2) Consumed nominal power PI _N | Mains power consumption for 230 V rated voltage V at multi-turn actuator run torque (approx. 35% of the maximum torque) and maximum output speed. | | | | |
| 3) Nominal current I _N | Mains current consumption for 230 V rated voltage V at multi-turn actuator run torque (approx. 35% of the maximum torque) and maximum output speed. | | | | |
| 4) Max. current I _{max} | Mains current consumption for 230 V rated voltage at maximum torque and approx. 50 % output speed. Starting current $I_A \le I_{max}$ | | | | |

| Notes on installation and sizing | | | | |
|----------------------------------|--|--|--|--|
| Electrical data | Current and power data are approximate. Due to usual manufacturing tolerances, there may be deviations from the values given. | | | |
| Rated voltage | Mains voltage for defining current and power data | | | |
| Motor operation | On the basis of the supplied 1-phase or 3-phase AC mains voltage, the frequency converter generates a variable 3-phase AC voltage, adjustable in terms of frequency and amplitude. Motor speed and thus actuator speed is internally set via the frequency. | | | |
| Motor protection | To protect against overheating, PTC thermistors are embedded in the motor windings. Evaluation of PTC thermistors is integrated in the ACVExC controls. | | | |
| Mains voltage, mains frequency | Permissible variation of mains voltage: ±10 % Permissible variation of mains frequency: ±5 % | | | |
