1) – 4) Refer to Notes on Electrical data SQEx .2/SQREx .2 part-turn actuators with 1-phase AC motors

We reserve the right to alter data according to improvements made. Previous documents become invalid with the issue of this document.

Notes on installation and sizing																							
Motor data	Motor data is approximate. Due to usual manufacturing tolerances, there may be deviations from the values given.																						
Motor protection	<p>To protect against overheating, thermostiches or PTC thermistors are embedded in the motor windings.</p> <p>Actuators without integral actuator controls (AUMA NORM): Thermostiches or PTC thermistors have to be considered within the external controls (refer to terminal plan). Note: Failure to connect thermostiches or PTC thermistors shall void the warranty for the motor. According to EN 60079-14, a thermal overcurrent protection device (e.g. motor protection switch) must be installed for explosion-proof actuators in addition to the thermostiches. PTC thermistors additionally require a suitable tripping device in the actuator controls.</p> <p>Rating of the thermostiches</p> <table border="1"> <thead> <tr> <th colspan="2">AC current</th> <th colspan="2">DC current</th> </tr> </thead> <tbody> <tr> <td colspan="2">250 V, 50 – 60 Hz</td> <td>60 V</td> <td>1.0 A</td> </tr> <tr> <td>cos φ = 1</td> <td>2.5 A</td> <td>42 V</td> <td>1.2 A</td> </tr> <tr> <td>cos φ = 0.6</td> <td>1.6 A</td> <td>24 V</td> <td>1.5 A</td> </tr> </tbody> </table> <p>Actuators with AMExC or ACExC integral controls: Thermal motor protection is already integrated.</p>	AC current		DC current		250 V, 50 – 60 Hz		60 V	1.0 A	cos φ = 1	2.5 A	42 V	1.2 A	cos φ = 0.6	1.6 A	24 V	1.5 A

Notes on Electrical data SQEx .2/SQREx .2 part-turn actuators with 1-phase AC motors	
1) Nominal power P _N	<p>Mechanical power output at motor shaft at run torque of part-turn actuator (corresponds to approx. 35 % of maximum torque).</p> <p>The consumed electrical power can be calculated using the following formula: P = U x I x cos φ</p>
2) Permanent split/starting capacitor	For VWX /SWX motors, operating capacitors are integrated within the motor.
3) Nominal current I _N	Current at run torque
4) Max. current I _{max}	Current at maximum torque
